

## CloudSigma Load Balancing Solution from Lagrange Systems

The load balancing solution resulting from the partnership between CloudSigma and Lagrange Systems is offered in two tiers - Standard and Professional. CloudSigma and Lagrange Systems are also preparing a lite tier. This solution is still in development.

The **Standard offering** includes some advanced features, such as auto scaling and more advanced rule management. This option is offered as a managed service by CloudSigma. End users do not have direct access to Lagrange.

The **Professional tier** exposes all functionalities that Lagrange's load balancer has to offer. End users have access to Lagrange support.

The main advanced features covered by the Standard/Professional tier are listed in the table below.

Feature	Description	Lite	Standard	Pro
Load Balancing	HTTP/HTTPS load balancing.	X	X	X
Geo Load Balancing	Multi-location load balancing.		X	X
Auto-scaling	Auto-scaling based on traffic demands.		X	X
Optimization/ Dynamic Caching	Automatic web optimization and acceleration.	X	X	X
Monitoring	Dashboard for logs, performance and KPIs.	X	X	X
SSL Termination	Terminate SSL/HTTPS session.	X	X	X
Web Application Firewall	Custom application firewall.		X	X
Bot protection	Protection against bots.		X	X
Right-sizing and healing	Automated server provisioning and scaling, including rule management.		X	X
Alerting	Custom alerts in real time.		X	X
Tier 1 support	First support tier.	CS	CS	LS
Tier 2 support	Second support tier (escalation).	LS	LS	LS
